Before usage, the resistor values for R15 and R29 must be checked according to the High-Side Driver.

If the ntc sensor connected, for example, to AnIN3V3_0 => R100 and L27 shorted; R103=680 Ohm
When a 5000 step resolution is wanted and lower offset voltage => Use ADA4522-2 instead of LM358

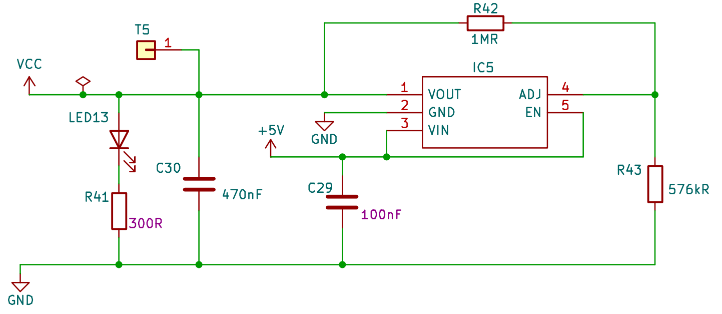
The circuit below is for an adjustable version (ST730MR).
It is recommended to use a fixed voltage regulator (ST730M33R).
In order for the circuit to be suitable for a fixed regulator, remove R42 and R43.
Vout=1.2*(1+R42/R43)

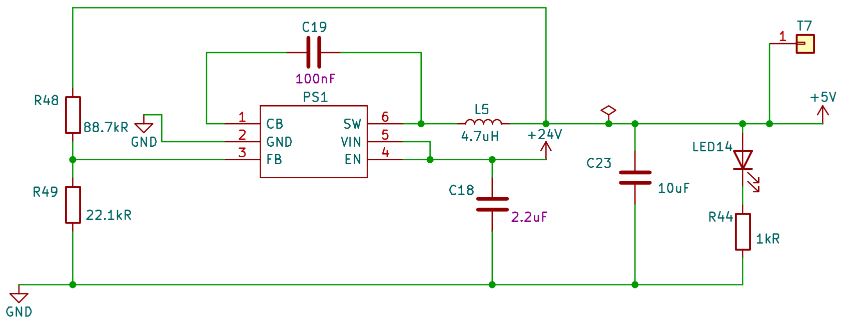


Sheet: /Power/Power3V3/
File: Power3V3.kicad_sch

Title: Power 3V3

Size: A4	Date:	**Rev: 1**
KiCad E.D.A. 8.0.1		Id: 1/15

The circuit below is for an adjustable version (LMR50410YFQDBVRQ1).
It is recommended to use a fixed voltage regulator (LMR50410Y5FQDBVRQ1).
In order for the circuit to be suitable for a fixed regulator, it is necessary to connect the FB pin to the SW pin directly, so for this remove R49, and solder a jumper in place of R48.



Sheet: /Power/Power5V/
File: Power5V.kicad_sch

Size: A4	Date:	**Rev: 1**
KiCad E.D.A. 8.0.1		Id: 1/15

The circuit below is for an adjustable version (ST730MR).
It is recommended to use a fixed voltage regulator (ST730M33R).
In order for the circuit to be suitable for a fixed regulator, remove R39 and R40.
Vout=1.2*(1+R39/R40)
